

**THIS IS WHAT COULD BE TRAPPED
IN YOUR FIELD AFTER
ONE SEASON.**

**Routinely Cleaning and Inspecting Your
Field Will Ensure That You're Providing the
Safest Surface Possible for Your Athletes.**

While routine brushing keeps your field free of surface debris it does not, however remove the dangerous metal that may exist beneath. After one season of band practice, scrimmages and Friday night games you may be surprised at what could be trapped in your field. Routine cleaning and inspection will significantly reduce the risk of serious injuries and extend the life and performance of your field. Our experienced professionals use industry specific machinery to remove debris, level reduced infill and verify that your field is in accordance with gMax ratings.

Shaw Sportexe provides great rates on annual and biannual cleaning and inspection packages. Contact us today to learn more about our exclusive specials.
