TRUE TO THE GAME

“Through the combination of player feedback and new technology, Shaw Sportexe has designed a product that simulates the performance of natural grass. You get a true ball bounce and ball roll that the player can trust in. Best of all, it's incredibly durable and you get more play time. I've seen it first-hand and I believe this will take baseball to the next level.”

John Smoltz
Former MLB Pitcher

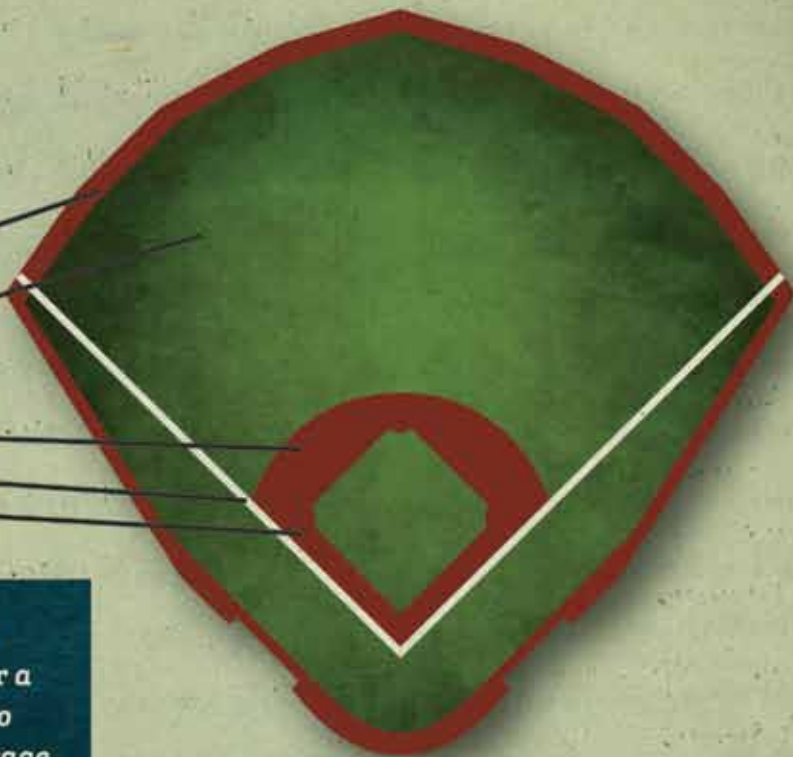

Introducing TruHop™, our new John Smoltz signature line of baseball turf. Uniquely designed with baseball player feedback, TruHop is the closest thing to natural grass for baseball fields of all levels. Its revolutionary design mirrors the real thing in terms of playability and performance yet provides durability that natural grass just can't rival.

- **True ball roll**—no snaking effect that might slow the ball down or shift directions
- **No spring-boarding effect**—a natural, true bounce for anticipated catches
- **Controlled infill system**—reduces infill splash
- **All weather, 24/7 play**—no shutting fields down or game cancellations for rain
- **More durable**—up to 4 times more play than natural grass
- **Soft to the touch**—non-abrasive, grass-like surface

Engineering Your Field

TruHop™ was designed to fit any baseball field configuration. The system can be engineered with various pile heights and infill ratios to fit each performance area of the field. Talk to one of our sales representatives about what makes most sense for your program.

- 1- Warning Track Turf/Infill
- 2- Outfield Turf
- 3- Infield Turf
- 4- Foul Lines
- 5- Base Path

“As a pitcher on the mound, I rely on my infielders to do their job. When I deliver a pitch and give up a ground ball, I want to know that my teammate has the advantage to field the hop. Unlike other synthetic turf systems, you are going to get more of a true bounce on a consistent surface similar to that of natural grass.”

Designed with Athletes in Mind

When it comes to baseball, no one knows the game better than the ones who play it. So reaching out to athletes, including former MLB pitcher John Smoltz, was critical to the design of TruHop. By gathering feedback and conducting multiple athlete-surface and ball-surface tests, we have engineered the ultimate baseball surface.
